Call For Speakers
Abstracts Due July 28, 2023
Broadcast Leadership Through Relentless Change

This year's IEEE Broadcast Symposium comes to NAB headquarters in Washington DC on Tuesday November 14 and Wednesday November 15. You are invited to propose thought-provoking presentations on the technical aspects of broadcast transmission for radio and television.

Your presentation should provide real world experience and technical expertise on current and future broadcast transmission topics in an industry faced with relentless change. Help others benefit from what you have learned solving problems in today's broadcast systems.

If you are a broadcast technical leader we want to hear about your experiences with; vendors that go above and beyond with products that solve real world problems, the tests you made, the results you obtained, and future technologies you are evaluating for your company. If you are a manufacturer or service provider, we want to learn about your creative solutions to customer problems, in-lab and field test results, and how you plan to address the future. Please consider that the IEEE Broadcast Symposium is focused on technical presentations and not on product marketing. Your presentation should identify problems and objectively discuss solutions. We are planning on at least 30 minutes per session, 45 minutes per session is preferred.

We are looking for both current and future television and radio technology presentations in any of these broad categories or allied subjects:

- **Transmission Equipment**
- **Modulation/Coding Technology**
- **Performance Measurement and Monitoring**
- **Regulations Pertinent to Broadcast**
- **Audience Measurement**
- **Receive Devices**
- **Data Transmission and Delivery**
- **Sustainability Considerations**

IMPORTANT DATES

- **Short Abstract Submission Deadline: July 28, 2023**
- **Notification of Acceptance: August 21, 2023**
- **Submission of Presentations: November 3, 2023**
- **IEEE Broadcast Symposium 2023: November 14-15, 2023**
